

# ETHICS OF CLIMATE CHANGE

**Climate change is not only a political, economic, and social crisis, it presents one of the great moral problems of our time.**

**This course is an introduction to the science, policy, and ethics of climate change.**

**Interdomain GH/GN  
RL ST/PHIL/METEO 133**

**Available to schedule  
after Dec. 15<sup>th</sup>**

**12:05-1:20 P.M.  
TUES & THURS  
107 AG INDUSTRIES**

Interact with experts from across the University to see how climate change is being approached in a multi-disciplinary fashion.

Understand the moral dimensions of climate change, the implications for human civilization, and for the biosphere.

Learn from EMS faculty working on paleoclimate, modeling, carbon sinks, ocean acidification, and more.

Learn from humanists, economists, historians, and artists at Penn State.

Tour Penn State facilities—like the East Campus Power Plant—and interview researchers developing new energy and sequestration technologies.

Prepare for a mock negotiation by learning about the energy profile and history of assigned countries.
